## **A Comparison of Nuclear Reactors**

	Neutron that contributes to fission	Fuel	Moderator	Coolant	Conversion Ratio*
Fast breeder reactor (FBR)	Fast neutron	Fissile plutonium about 16 to 21%  Depleted uranium about 79-84%  (Blanket fuel is depleted uranium only.)		Sodium	Approx. 1.2
Lightwater reactor (BWR, PWR)	Thermal neutron	Uranium-235: 3-5% Uranium-238: 95-97%	Light water	Light water	Approx. 0.6

\*Conversion Ratio: Percentage of fuel generated relative to fuel consumed as 1.0.
